PROFESSIONAL SUMMARY

Motivated and detail-oriented BSc IT student (2023–2026) with hands-on experience in AI model evaluation, deep learning, and business analytics. Currently working as an AI Response Analyst (Business Analyst) at Turing, with a proven research track record including a peer-reviewed publication on precision agriculture. Skilled in SQL, Python, Power BI, and machine learning frameworks. Passionate about applying data analytics and AI tools to generate actionable insights and support data-driven decision-making.

WORK HISTORY

AI Response Analyst (Business Analyst) | Turing — Remote 2026 – Present

- Evaluate and provide structured feedback on AI-generated responses to improve model accuracy, relevance, and safety.
- Apply business analytics frameworks to assess output quality, flagging errors and edge cases across diverse domains.
- Collaborate asynchronously with global teams on prompt refinement and evaluation rubric development.
- Contribute to multimodal evaluation pipelines, leveraging a background in data science and ML.

Research Intern | Amity Institute of IT, Lucknow 05/2025 – 07/2025

- Developed and trained CNN, VGG16, and ResNet50 models in Python to detect solar panel defects.
- Increased model accuracy from 62.6% to 93.1% using advanced data preprocessing and augmentation techniques.
- Performed data cleaning, feature engineering, and GAN-based augmentation to enhance rare defect detection.
- Authored project documentation and presented findings to faculty and departmental reviewers.

EDUCATION

BSc Information Technology | Amity Institute of IT, Lucknow 2023 – 2026 (Expected)

CGPA: 8.7 / 10

Class 12 — CBSE | J.D. Saraswati Vidya Mandir, Kanpur 2022

Class 10 — CBSE | J.D. Saraswati Vidya Mandir, Kanpur 2020

PROJECTS

Solar Panel Defect Detection with GAN-Augmented Data | Amity Institute of IT 05/2025 – 07/2025

- Applied deep learning (CNN, VGG16, ResNet50) for automated defect classification in solar panels.
- Improved model accuracy from 62.6% to 93.1% through GAN-based data augmentation and preprocessing.
- Enhanced rare defect detection via targeted data visualization, class balancing, and feature engineering.

StressPPG — PPG-Based Stress Detection System | NTCC Academic Project 2026

- Built a non-invasive stress detection system using PPG signals and Heart Rate Variability (HRV) features, classifying physiological states into Calm and Stressed using a Random Forest model achieving 84.27% accuracy.

- Engineered a full ML pipeline including signal preprocessing, HR/HRV feature extraction, model training, and video-based remote PPG (rPPG) inference from webcam input.
- Deployed an interactive Streamlit web app with real-time visualizations and downloadable prediction reports; live demo hosted on Streamlit Cloud. Tech stack: Python, scikit-learn, OpenCV, Streamlit, Pandas, NumPy.

PUBLICATIONS & RESEARCH

Enhancing Precision Agriculture using Adaptive Machine Learning Models — AISD-2024 Workshop | March 2025

- Co-authored peer-reviewed research applying wireless sensor data with adaptive ML models.
- Achieved 92% precision and 90% accuracy in predicting crop conditions using real-world sensor datasets.
- Demonstrated how AI-driven analytics can meaningfully improve precision agriculture outcomes.

TECHNICAL SKILLS

Data Analytics & BI:

SQL, Excel, Google Sheets, Power BI, Tableau, Python (Pandas, NumPy, Matplotlib, Seaborn)

Machine Learning & AI:

Deep Learning (CNN, VGG16, ResNet50), GAN Augmentation, scikit-learn, TensorFlow / Keras

Data Engineering:

Data cleaning, transformation, preprocessing, ETL pipelines, data warehousing concepts

Statistical Analysis:

Regression, hypothesis testing, forecasting, statistical modeling, data visualization

Programming:

Python, Java, HTML/CSS

Collaboration Tools:

MS Teams, Zoom, Google Workspace, Slack

CERTIFICATIONS

- Oracle Cloud Infrastructure 2025: AI Foundations Associate (Valid until Aug 2027)
- Introduction to Data Science — Cisco Networking Academy (2025)
- Introduction to Cybersecurity — Cisco Networking Academy (2025)

ACCOMPLISHMENTS

- Published peer-reviewed research on adaptive ML in precision agriculture (AISD-2024 Workshop).
- Built a production-grade deep learning pipeline achieving 93.1% accuracy for solar panel defect detection.
- Recognized for strong analytical and problem-solving skills across academic and professional projects.
- Actively contributing to AI model quality improvement as an analyst at Turing (remote, 2025–present).
